RURAL ROTATION PROGRAM

UTAH MEDICAL EDUCATION COUNCIL

www.umec.utah.gov

SECTION 1: CURRENT STATUS OF UTAH RURAL HEALTHCARE

1.1 RURAL ROTATION PROGRAM

Of the total population in Utah, about 10.5% are living in a designated rural county¹. Access to healthcare is an important aspect to the well-being of those living in rural counties. However, 26 out of the 29 counties in Utah are experiencing some form of Primary Health Professional Shortage Area (HSPA) designation². This means that the population to clinician ratio falls below 3,500 people to every primary care physician in these counties. Additionally, only 4.9% of new medical students plan on practicing in rural or non-urban areas³, which could potentially exacerbate shortage issues in rural healthcare.

The objectives of the Utah Medical Education Council (UMEC) *Rural Rotation Program* are two-fold: to provide needed professionals to underserved areas of Utah; and to provide clinicians with experience practicing in a rural setting. This will potentially improve the chances that healthcare professionals choose to practice in a rural area upon graduating.

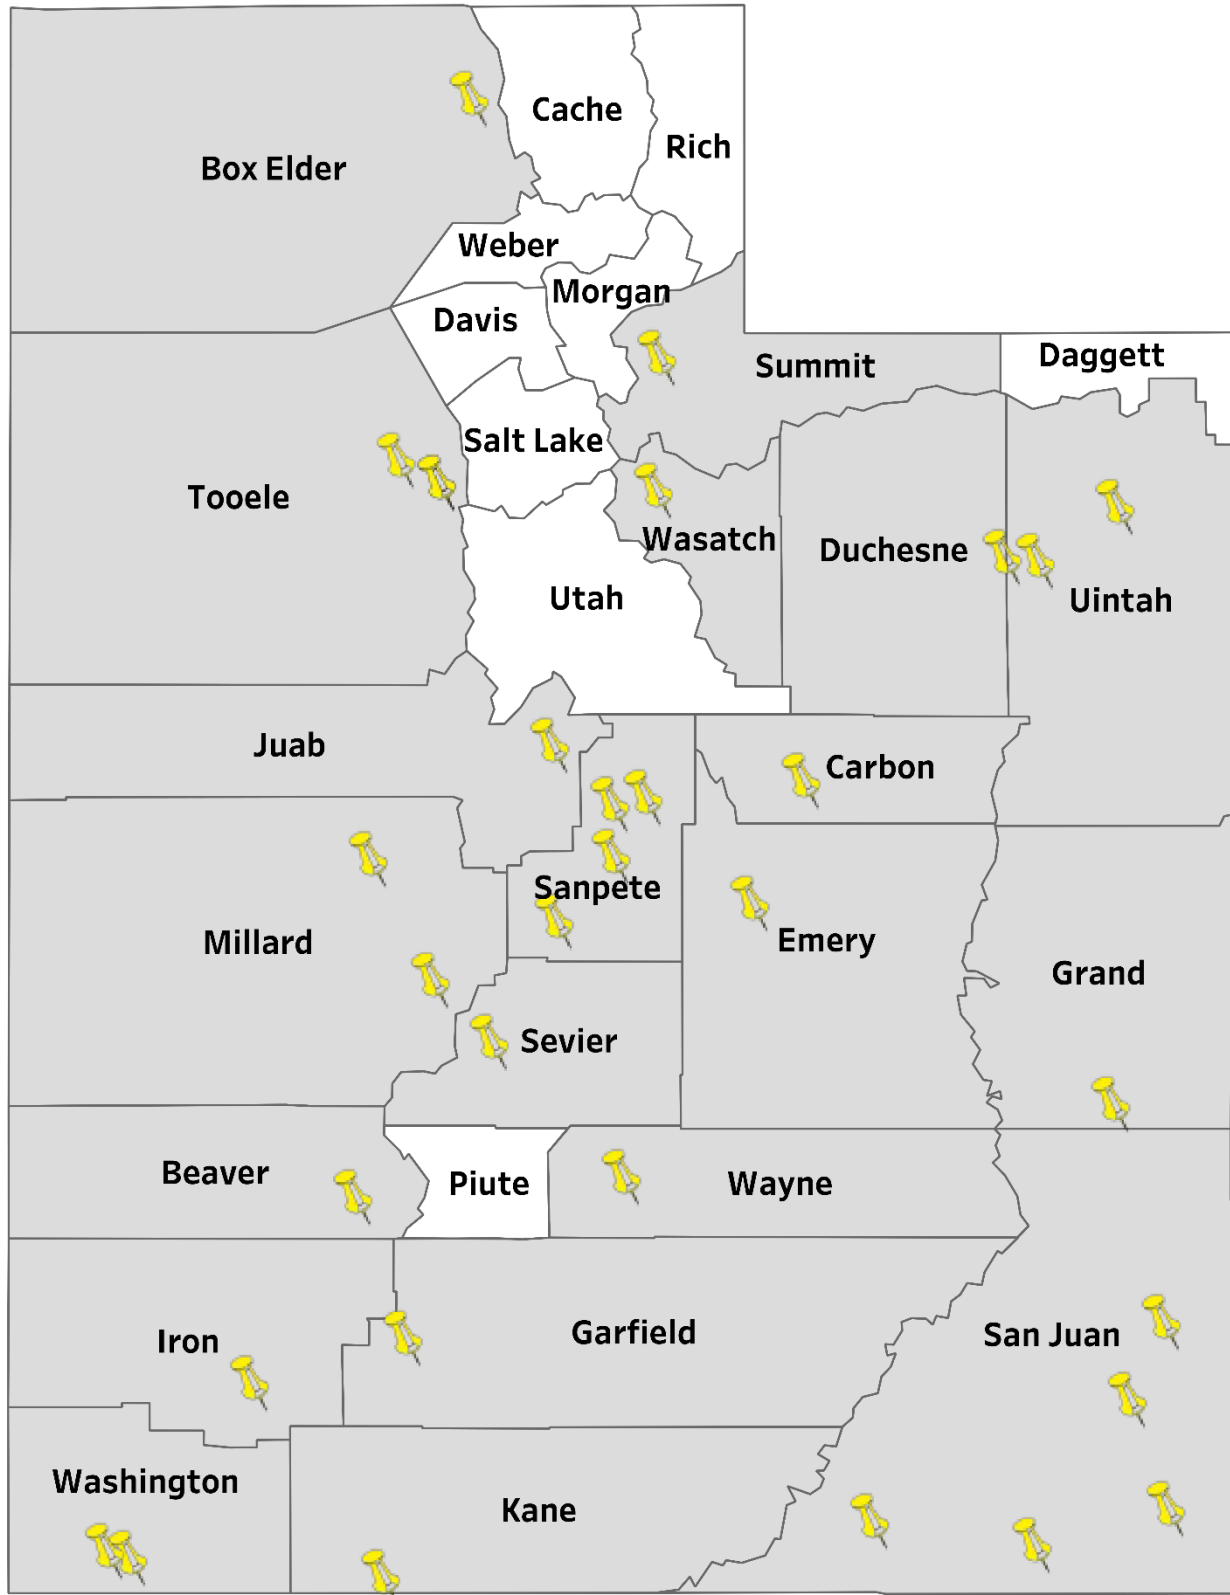

When the UMEC initiated its rural program, there were only six medical residents in three areas. The program has since expanded in many aspects including the number of rotations, the number of locations, and the variety of healthcare professions. Because each county experiences a variety of different shortages, the UMEC has sponsored rotations for several specialties, however, there is an emphasis on primary care.

¹ See United States Department of Agriculture (USDA) Economic Research Service: State Fact Sheet - <https://www.ers.usda.gov/data-products/state-fact-sheets/>

² HPSA's are defined as areas experiencing "shortages of primary medical care, dental or mental health providers and may be geographic, demographic, or institutional". <https://ruralhealth.health.utah.gov/workforce-development/primary-care-office-pco/shortage-designations/>

SECTION 2: OUTLINE OF THE UMEC RURAL ROTATION PROGRAM, FY 2019

2.1 RURAL ROTATIONS IN 2019

In 2019, the UMEC *Rural Rotation Program* consisted of medical residents, medical students (MS), dental residents (DDS), advanced practice registered nurse students (APRNs), pharmacy students, and physician assistant students (PAs). These 118 residents/students took part in 120 rotations in 34 rural locations across 21 different Utah counties. Some medical residents and students also partook in split rotations, meaning they did a full rotation in two different locations.

Table 2 – Rotations and Residents/Students, FY 2019

⁴ In order for out-of-state students to qualify for these rural rotations, they must show a background or interest in working in rural Utah.

SECTION 3: OUTLINE OF UMEC RURAL ROTATION PROGRAM, 2007-2019

3.1 RURAL ROTATION PROGRAM SINCE INCEPTION: 2007 – 2019

Since 2007, the UMEC has sponsored 1,146 rotations for 993 healthcare residents/students. Rotations have been undertaken by medical residents (20.8%), pharmacy students (24.2%), PAs (30.0%), dental residents (8.3%), medical students (13.3%) and APRNs (3.3%). These rotations have provided services in 51 different areas, covering 26 of the 29 counties in Utah. San Juan and Washington counties have had the highest number of rotations.

3.2 PROFESSION SPECIFIC HIGHLIGHTS: 2007-2019

3.2a MEDICAL RESIDENTS

Medical residents are the third largest group sponsored by the UMEC *Rural Rotation Program* with 291 (25.4%) rotations completed by 274 residents (the number of physician assistant rotations overtook those completed by medical students in 2016). The rotations for medical residents have encompassed numerous specialties, with Family Medicine comprising the majority (65.6%) followed by Obstetrics and Gynecology (23.4%). Family Medicine and OB/GYN residents are given a higher priority due to the demand for their services in rural communities.

Table 10 – Number of Medical Residents by Specialty, 2007- 2019

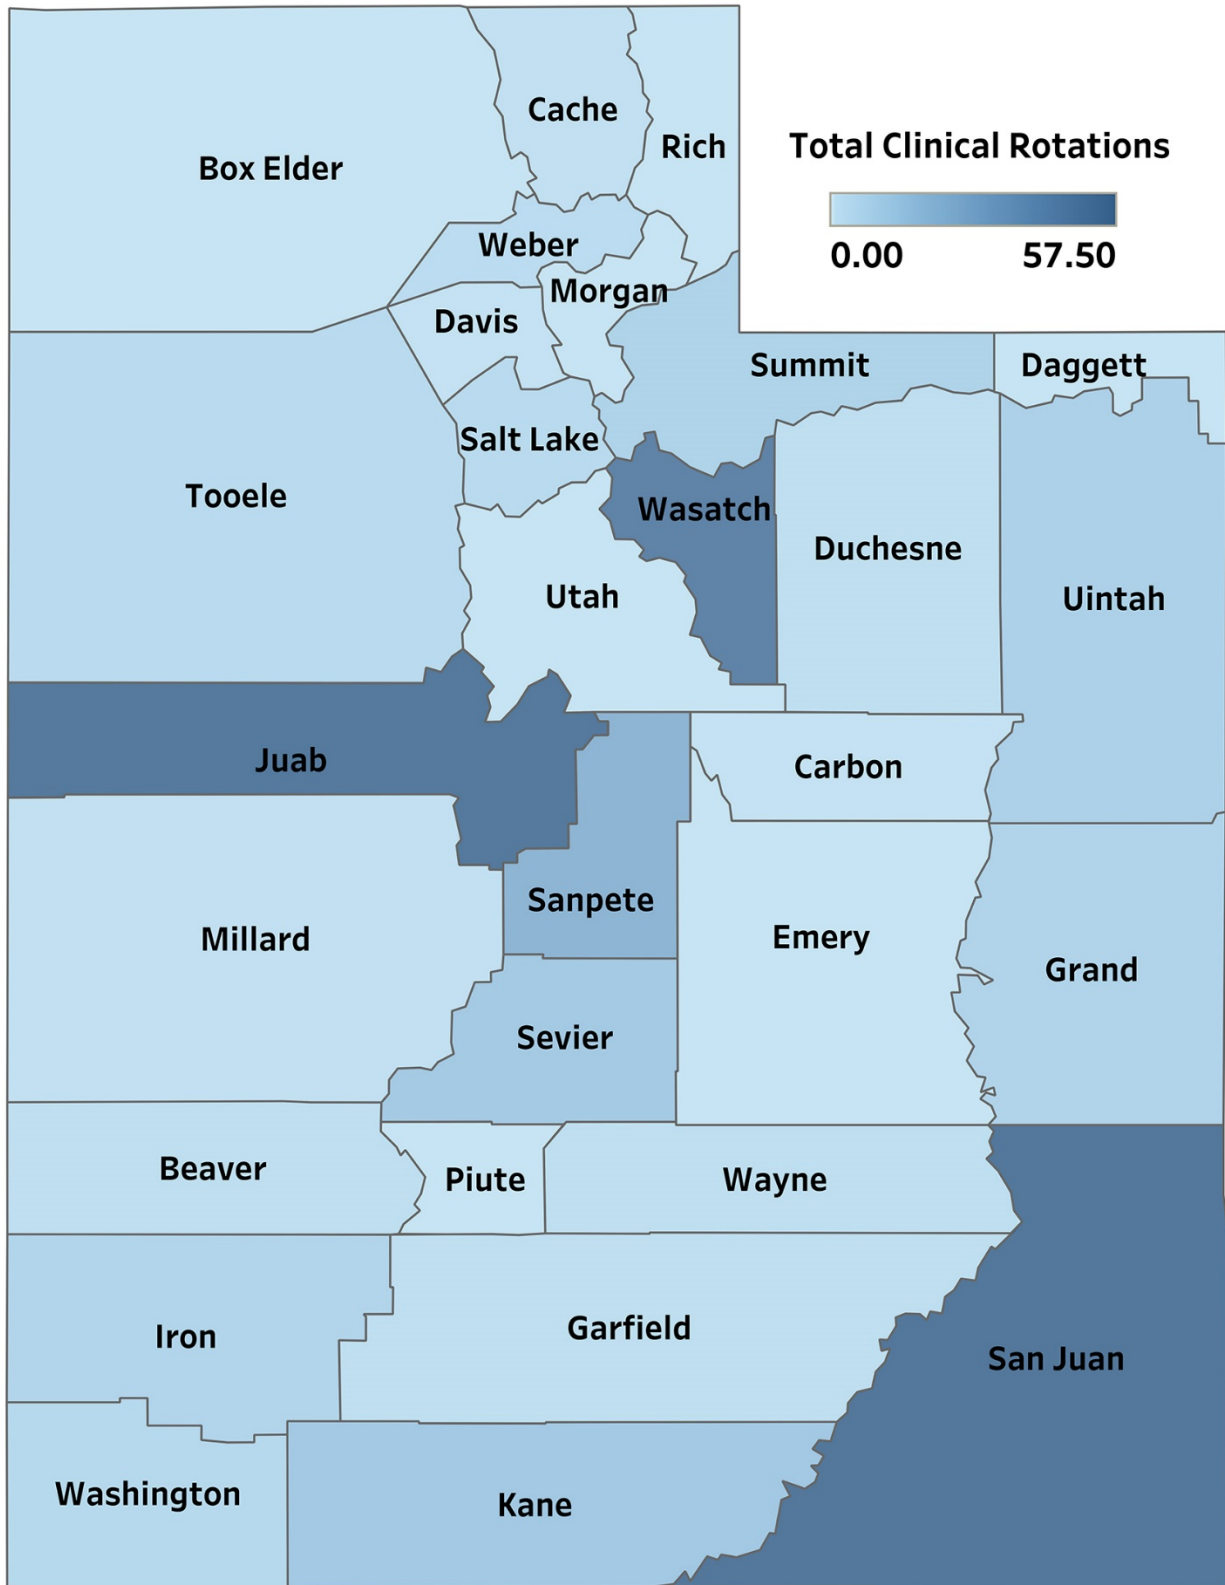

Specialty	Residents	Rotations
<i>Anesthesiology</i>	3 (1.1%)	3 (1.0%)
<i>Emergency</i>	2 (0.7%)	2 (0.7%)
<i>Family Medicine</i>	178 (65.0%)	191 (65.6%)
<i>Geriatric</i>	1 (0.4%)	1 (0.3%)
<i>Internal</i>	4 (1.5%)	5 (1.7%)
<i>OB/GYN</i>	66 (24.1%)	68 (23.4%)
<i>Oncology</i>	1 (0.4%)	1 (0.3%)
<i>Pathology</i>	1 (0.4%)	1 (0.3%)
<i>Pediatrics</i>	6 (2.2%)	6 (2.1%)
<i>Psychiatry</i>	10 (3.6%)	10 (3.4%)
<i>Radiology</i>	1 (0.4%)	1 (0.3%)
<i>Surgery</i>	1 (0.4%)	2 (0.7%)
TOTAL	274	291

Medical residents have rotated or had rotation assistance across 29 different underserved locations in Utah. The most common location for Family Medicine providers is Nephi (29.3%) and almost half of OB/GYN rotations take place in Heber City (47.1%).

Table 11 – Locations of Rotations by Profession, 2007-2019

Total	191	68	32	291

Clinical Rotations, Medical Residents ONLY (2007-2019)

3.2b Dental Residents

The UMEC has sponsored 89 rural rotations for 89 general practice residencies for dentists from the University of Utah from 2008 to 2019. Of note, these residents have all served in the rural underserved area of Montezuma Creek, Utah. With an estimated 10 dentists practicing in all of San Juan County, these residents have provided an invaluable contribution to the oral health of this community.

3.2c Pharmacy Students

The UMEC has funded 312 pharmacy students to do 342 rotations from 2009 to 2019. Currently, 4 sites make up the majority (51.5%) of all pharmacy student rotations: St. George (n=37), Blanding (n=62), Cedar City (n=35), and Mt. Pleasant (n=42). Additionally, 94.4% of all pharmacy students have come from the University of Utah.

3.2d Physician Assistants

The UMEC has funded 181 physician assistants to participate in 272 rotations. Just over half (54.6%) of these rotations have been in Montezuma Creek, Green River, Cedar City and St. George. While the majority of other students and residents participating in the UMEC *Rural Rotation Program* come from the University of Utah, PAs differ with over two thirds of participants coming from other schools (63.6%).

SECTION 4: FUTURE IMPORTANCE OF RURAL ROTATION PROGRAM

4.1 PHYSICIANS

The UMEC *Rural Rotation Program* is structured to help train, familiarize, and provide incentive for individuals to pursue a career in rural communities in Utah. Family Medicine residents that completed a UMEC rotation chose to practice in a rural Utah setting after graduation 8.5% of the time. Less medical residents are participating in the rural rotation program as evidenced by becoming the third largest group sponsored. In 2016, medical residents were the largest group of participants but have since been surpassed by pharmacists and physician assistants. Physicians play a vital role in rural healthcare and additional action to obtain more medical resident participation may be needed.

4.2 RURAL WORKFORCE RETIREMENT OVER NEXT DECADE

The UMEC's data on different healthcare workforces can help illuminate retirement patterns of each workforce by county. This self-reported data is crucial for helping to project expected retirement and prepare for any adverse projections in these already underserved communities. Based on UMEC's 2016 workforce reports⁵, roughly 30% of healthcare providers from the 20 rural counties with UMEC-sponsored rural rotation sites expect to retire over the next decade.

4.3 AGING RURAL POPULATION IN UTAH

Older age cohorts typically have a higher demand for healthcare services on average, relative to their younger counterparts. Demand for health services can be expected to increase as the proportion of the rural community elderly cohort increases. An aging population can impose additional demand on the local health system, and by doing so, worsen any medical personnel shortages that may already exist. The population of those aged 60 and older in rural counties is projected to increase in the next ten years⁶, thereby possibly causing an increased demand on a smaller workforce.

4.4 MOVING FORWARD

In shaping the need for healthcare services in rural and underserved areas in Utah, the UMEC *Rural Rotation Program* will continue to provide necessary healthcare professionals to these areas. Moreover, the *Rural Rotation Program* can also influence some practitioners into selecting practice settings in rural and underserved areas in Utah after graduating. As the population continues to age, and individuals retire from the rural workforce, the need to replace and grow these workforces becomes a more challenging and crucial task.

⁵ The UMEC produces different workforce analyses for varying healthcare professionals and asks about retirement plans. These reports can be seen at <http://umec.gov/publications/>
